**JEB BUSH JOINS ADVISORY BOARD OF THE NATION'S
LEADING DECONTAMINATION COMPANY - ZIMEK**
Former Florida Governor Joins Growing Movement Toward Prevention of Infections

TAMPA, FL –Former Florida Governor Jeb Bush has joined the Advisory Board of Zimek Technologies, the nation's most-respected and innovative decontamination experts.

Zimek's revolutionary rapid decontamination systems were invented to help defeat and prevent the spread of deadly viruses such as H1N1 and bacteria such as MRSA.

Governor Bush has joined Zimek to support the fight against the proliferation of infectious diseases. Reducing infections through prevention by decontaminating rooms and vehicles will help reduce the enormous burden suffered by the U.S. healthcare system in treating the victims of infectious bacteria and viruses.

"Decontamination can play a larger role in our efforts to combat and prevent deadly viral and bacterial infections, giving us a new and forceful weapon, like vaccinations and antibiotics, in the war against infectious diseases," Governor Bush said. "There must be a stronger focus on prevention of infections, not just mitigation through medical intervention after infections occur.

"Zimek is a powerful addition to our arsenal of weapons to fight infectious diseases. It has proven effective for clients ranging from the U.S. Department of Homeland Security, the Veterans Administration, Disney Environmental Services and a wide range of first responder agencies throughout the country," Governor Bush said. "I am excited by the opportunity to work with Zimek to contribute to the safety of our families by helping to introduce this life-saving technology far and wide."

"Governor Bush's joining Zimek is a testament not only to the effectiveness of our products, but to the growing realization that prevention of infectious disease through decontamination is a cost-effective way to keep families and children safer from harmful and life-threatening viral and bacterial infections," said Kurt Grosman, Zimek's Chief Executive Officer.

Zimek's Micro-Mist™ is singularly capable of infiltrating and destroying hotbeds of pathogens that would otherwise be unreachable due to surface tension limitations. Micro-Mist™ has the unique, added capacity to inhibit the regrowth of pathogens between routine periodic Micro-Mist™ treatments, providing a more thorough method of decontamination.

Zimek Technologies, LLC and Zimek Technologies IP, LLC are independent Florida limited liability companies that are exclusively managed by Zimek Technologies Management Company, a Florida corporation.
